

Industrial Wastewater Management Guide

PAINT INDUSTRIES

Kampala Pollution Control Task Force

This Wastewater Management Guide provides facility owners, workers, lead agencies and others with practical information about mitigating water pollution from paint industries.

The objectives of the Guide are:

To help better understanding of the need for wastewater management and the associated benefits.

To provide paint industries with a reference tool for managing wastewater.

To provide key information on the existing institutional and legal framework as well as best practices for cleaner production and resource recovery/reuse optimization.

This Guide has been developed in close consultation with key stakeholders and through review of relevant literature regarding industrial best practices and cleaner production. In addition, formal and informal technical discussions with members of the Kampala Pollution Control Task Force (PTF) have been used to generate expert opinion on wastewater management for the paint industrial sub-sector. The preparation of the Guide has been supported by the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) Reform of the Urban Water and Sanitation Sector Programme (RUWASS) as well as the International Water Stewardship Programme (IWaSP), implemented by GIZ on behalf of German Development Cooperation and DFID.

Why wastewater management?

It's the law

Proper management of wastewater is required by law. Failure to comply with regulatory and legal requirements may lead to fines and/or other penalties.

(See page 10)

It's better for the environment

Toxic pollutants released in wastewater cause damage to the environment, affecting plant and animal life.

It's better for public health

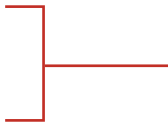

Toxic pollutants in wastewater contaminate surface water and ground water, and may end up in the food chain, exposing people to serious public health issues.

It makes financial sense

Water is a resource like any other, and therefore has an associated cost. The more water used, the higher the costs. By reducing the amount of water used, and by recovering and reusing water wherever possible, companies can save money and be more competitive.

In many cases pollutants in wastewater represent wasted raw materials. When properly handled, these can be recovered and reused leading to cleaner wastewater and cost savings on materials for companies.

Reducing the pollution load in water sent for treatment by NWSC will reduce the cost of treatment. This may in turn translate into reduced costs of water procured from NWSC.

Almost all the surface and ground water In Kampala is polluted and the city's inhabitants are therefore exposed to serious health risks associated with water pollution. According to Ministry of Health and KCCA, the recent outbreak of typhoid was partly due to polluted surface and ground water.

If not properly treated, wastewater from paint industries may contain lead (Pb) and other heavy metals. Heavy metals in water bodies such as lakes and rivers may enter the human food chain through bioaccumulation in vegetables, meat and especially fish exposed to polluted water. In humans, lead affects the brain and central nervous system and may cause coma, convulsions and even death. In children, exposure to lead may additionally cause mental retardation and behavioral disruption.

In 2011, Crown Beverages Ltd invested \$ 18,495 (about UGX 47.2M) to procure and install a 114,000 litre tank for water harvesting. As a result, the company reduced annual tap water consumption by 4,433,000 litres, saving over \$5,400 (about UGX13.7M) annually)

In 2010, Leather Industries of Uganda in Jinja invested \$50,000 (about UGX125M) to install a chrome recycling plant. The recycling plant treats the wastewater and discharges the chrome into a regeneration tank from where it is pumped back into the factory for reuse. As a result, the wastewater discharged from the factory is now almost free of chrome and the company has saved over 40% on chrome costs.

What to avoid

IMPROPER CLEANING METHODS

Manual cleaning using basic equipment

→ More water and cleaning agents used

CONTAINERS NOT CLEANED IMMEDIATELY

Paint dries and hardens over time

→ More solvents required for cleaning

TANKS AND CONTAINERS NOT CLEANED BEFORE DISPOSAL

Subsequent cleaning may take place in rivers and streams

→ Environmental damage and public health risks

PAINTS NOT STORED ON IMPERMEABLE GROUND COVER

Leaking paint mixes with water and seeps into the groundwater

→ Pollution & public health issues

LACK OF PRODUCTION SCHEDULING

Extra cleaning between mixes required

→ More wastewater generated

PRODUCT WASTAGE

Customer returns and obsolete products NOT reused or properly disposed of

→ Resources wasted

EFFECTIVE WASTEWATER MANAGEMENT RELIES ON A TWO-STAGE APPROACH

1 Reducing the amount of wastewater generated

Making processes more efficient and reusing water wherever possible will lead to an overall reduction in the amount of wastewater generated.

2 Ensuring wastewater is as clean as possible

Ensuring end-of-pipe wastewater is properly treated and meets effluent discharge standards will lead to a reduction in toxic components entering the environment.

1 STEPS TO REDUCE WASTEWATER GENERATION

Use pre-clean and dry cleanup methods before wet cleaning. This reduces the volume of water used and the volume of wastewater generated.

Use the minimum amount of cleaning agents and detergents. This saves on the costs of cleaning agents in addition to minimizing the amount of cleaning agent pollution in wastewater.

Avoid use of wastewater streams as a transport medium. Transfer solids and particulate matter by mechanical means.

Ensure employees are trained and aware of how to minimize water usage and wastewater generation.

Fit drains with screen and/or traps to prevent solid materials from entering the effluent system.

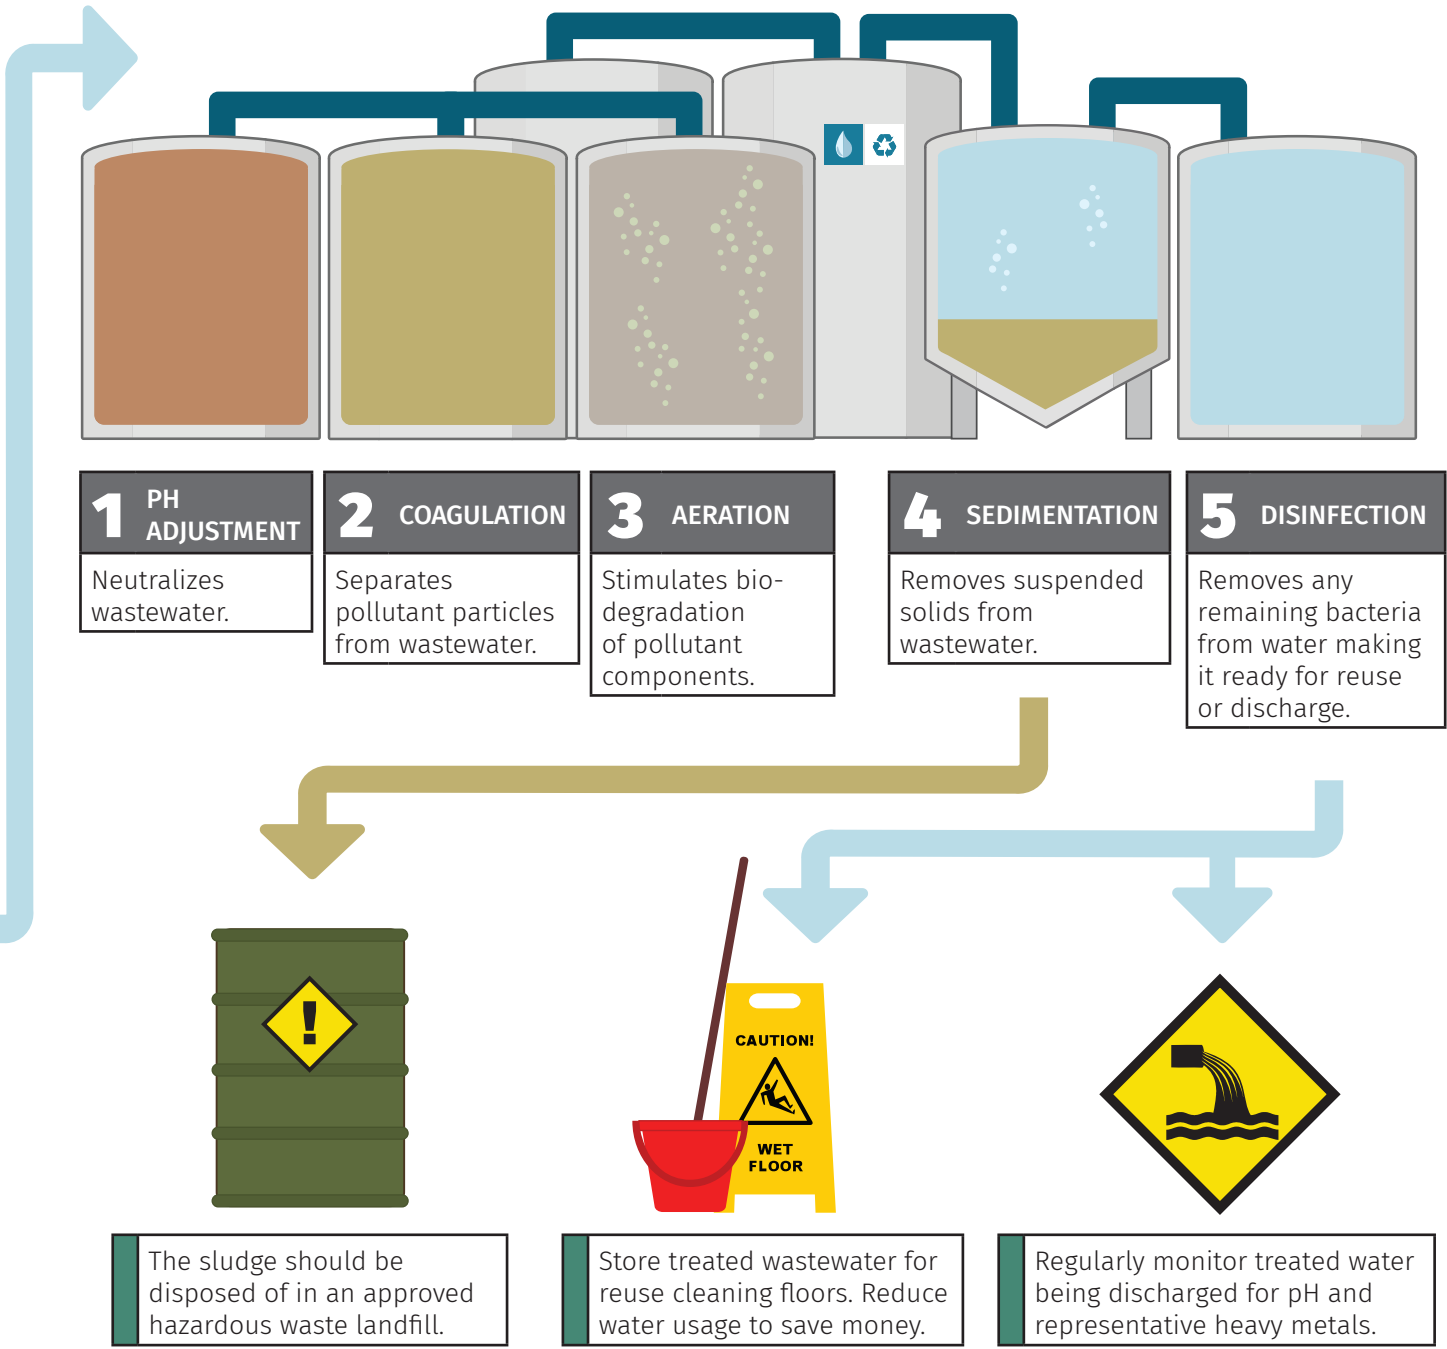

2 | BEST PRACTICE AND WASTEWATER TREATMENT

EVERY PAINT INDUSTRY FACILITY SHOULD HAVE AN EFFLUENT TREATMENT PLANT

Treat all wastewater leaving the facility, including water collected after washing and cleaning.

Small and affordable effluent treatment plants can be assembled using locally available equipment. 

Wastewater regulations

Paint industry firms should be aware of and comply with the following legal requirements regulating the treatment of wastewater.

Permit/License/Certificate	Law/Regulations	Fee (UGX)															
EIA Certificate of Approval (for new, expansions or refurbishments)	<ul style="list-style-type: none"> National Environment Act Cap 153 National Environment (Impact Assessment) Regulations, 1998 	If project/business cost is: <table border="1"> <tr> <td><50M</td> <td>250,000</td> </tr> <tr> <td>50M-100M</td> <td>500,000</td> </tr> <tr> <td>100M-250M</td> <td>750,000</td> </tr> <tr> <td>250M-500M</td> <td>1,000,000</td> </tr> <tr> <td>500M-1B</td> <td>1,250,000</td> </tr> <tr> <td>1B -5B</td> <td>2,000,000</td> </tr> <tr> <td>>5B</td> <td>0.1% of the project cost</td> </tr> </table>		<50M	250,000	50M-100M	500,000	100M-250M	750,000	250M-500M	1,000,000	500M-1B	1,250,000	1B -5B	2,000,000	>5B	0.1% of the project cost
<50M	250,000																
50M-100M	500,000																
100M-250M	750,000																
250M-500M	1,000,000																
500M-1B	1,250,000																
1B -5B	2,000,000																
>5B	0.1% of the project cost																
Pollution License (for activities polluting the environment in excess of standards)	<ul style="list-style-type: none"> National Environment Act Cap 153 	Determined in accordance with Polluter Pays Principle															
License to Own and Operate a Wastewater Treatment and Disposal Plant	<ul style="list-style-type: none"> National Environment (Waste) Management Regulations, 1999 	Application fee	50,000														
		License fee	300,000														
Wastewater Discharge Permit	<ul style="list-style-type: none"> The Water Act, Cap 152 The Water (Waste Discharge) Regulations SI 152-1 	Permit processing fees	650,000														
		Annual discharge fees	depend on volume and the biological and physiochemical quality of waste														
		The charges range from 500,000 to 13,000,000 and are calculated based on the criteria set out in the regulations															
License for Waste Storage	<ul style="list-style-type: none"> National Environment (Waste) Management Regulations, 1999 	Application fee	50,000														
		License fee	200,000														
License to Transport Waste (this can be outsourced to licensed waste transporters)	<ul style="list-style-type: none"> National Environment (Waste) Management Regulations, 1999 Basel Convention on Trans-boundary movement of wastes, in case the batteries are imported 	Application fee	50,000														
		License fee	100,000														
		Note: If transportation is outsourced, the cost depends on negotiation with the transporter															
Suitability of Premises Certificate	<ul style="list-style-type: none"> Public Health Act 	Fee	300,000														
Approval for Discharge into NWSC Sewerlines	<ul style="list-style-type: none"> National Water and Sewerage Corporation Act, 1995 	80% of water bill If not NWSC customer, water consumption is estimated															

Issuing Authority	How to Apply	Validity
National Environment Management Authority (NEMA)	Carry out an EIA (EIA conducted by certified EIA practitioners) Submit to NEMA for consideration	Has no validity period but it is subject to implementation of the project starting within five (5) years from the date of issuing an EIA certificate of approval
Pollution Licensing Committee (PLC) - NEMA	Apply to PLC through NEMA as a secretariat with documents indicating the characteristics and quantity of wastewater that will be discharged	Validity period – determined by the discharge i.e. how long will the facility require before rectifying the problem
Pollution Licensing Committee (PLC) - NEMA	Carry out an EIA and obtain an EIA Certificate of Approval Apply to PLC through NEMA as a secretariat and attach the plant designs	One (1) year
Directorate of Water Resources Management (DWRM) - Ministry of Water and Environment (MWE)	Install a wastewater treatment plant Start operations, and then: apply to Director, DWRM	Permit duration between one (1) year and three (3) years
Pollution Licensing Committee (PLC) – NEMA	Apply to PLC through NEMA as a secretariat	One (1) year
Pollution Licensing Committee (PLC) - NEMA	Apply to PLC through NEMA as a secretariat	One (1) year
Kampala Capital City Authority (KCCA)	Apply to KCCA for certification KCCA inspects and makes a decision	One (1) calendar year
National Water and Sewerage Corporation (NWSC)	Must first pre-treat wastewater to meet standards for discharge into sewer lines, apply for approval from sewerage department or water quality management department, NWSC for connection	Open

Periodic checks

Periodic checks and audits form an important part of a strategy to identify inefficient use of resources, inadequate management of waste, and opportunities for improvement. Increasing the efficiency of the utilization of resources, and reducing and avoiding the generation of pollutants is integral in protecting and improving the environment, ensuring the health of human beings, promoting sustainable development, and generating economic benefits to businesses.

Below is a summary of periodic checks that may be applicable for paint industries.

MANDATORY CHECKS

Type	Responsible institution	Frequency	Fees	Procedure
Compliance Environmental Audit	National Environmental Management Authority (NEMA)	Annual	No NEMA fees, only the Environmental Auditor needs to be paid	Engage a NEMA certified Environmental Auditor. (List available from NEMA)

RECOMMENDED CHECKS

Type	Responsible institution	Frequency	Fees	Procedure
Adoption of Cleaner Production Practices	Uganda Cleaner Production Centre (UCPC)	As and when required	UCPC fees depend on the size of the enterprise Small - up to \$2600 Medium - up to \$3800 Large - up to \$6600	Contact UCPC for more information
Self-Internal Audits	Firm/NEMA	As and when required	Environmental Auditor fees - depend on the magnitude of work	Engage a NEMA certified Environmental Auditor. (List available from NEMA)

Kampala Pollution Control Task Force

The Kampala Pollution Control Task Force (PTF) was formed with support from the GIZ RUWASS Programme. It comprises of Kampala Capital City Authority (KCCA), the Ministry of Water and Environment's Directorate of Water Resource Management (DWRM), the National Environmental Management Authority (NEMA), and National Water and Sewerage Corporation (NWSC). Uganda Manufacturers Association (UMA) and Uganda Cleaner Production Centre (UCPC) were also brought on board to enhance the engagement of the industrial sector through a Public-Private Dialogue (PPD) regarding Cleaner Production and improved resource recovery and reuse efficiency, with a focus on water, waste and energy optimization.

Key priorities of the task force include the following:

- **Information exchange and collaboration among key government institutions including: DWRM, KCCA, NEMA, NWSC to jointly engage the public and private sector about legal provisions and regulations on wastewater discharge and pollution control.**
- **Launch campaigns to enhance compliance to DWRM/NEMA permit regulations regarding wastewater discharge.**
- **Conduct joint industrial assessments and disseminate pollution monitoring information to the public and private sector.**
- **Engage potential priority polluters and the private sector in general in a dialogue with the public sector through the Kampala Public – Private Wastewater Dialogue on wastewater management and pollution control to increase awareness and trust.**

Also available in this series are Industrial Wastewater Management Guides for the following industries:

Battery Recycling Industries
Soft Drink Industries
Textile Industries
Dairy Industries
Garages
Abattoirs
Steel Rolling Mills
